Wildlife On The Heart Rare

- Curious facts about the heart of the animals -

Going slow for hibernation:
Bears decrease their heart rate from 40 bpm to 8 bpm during hibernation periods.

The quickest heart:
Hummingbirds have the fastest heart rate among all vertebrates: 1260 bpm

Two extra hearts:
Octopuses have 3 hearts: two brachial hearts and one systemic heart.

Getting bigger when needed:
Pythons and other reptiles double their heart size after breaking a prolonged fast.

An extra cardiac valve:
Crocodiles use an extra heart valve to derive blood back into the body instead of the lungs.

The highest blood pressure:
Giraffes have blood pressures around 280/180 mmHg. Their hearts weight up to 12 kg.

The biggest and slowest heart:
The heart of a blue whale beats only 8 times every minute and weights up to 500 kg.

Healing the damaged heart:
Zebrafish can regenerate as much as 20% of the heart after damage in only 2 months.
